

ICON™

PERFECTING WOOD, NATURALLY.

THERMALLY MODIFIED FOR SUSTAINABILITY, DURABILITY AND ICONIC BEAUTY.

We start with the highest quality wood possible, clear vertical grain Douglas Fir. Then we work on perfecting it. Our advanced thermal modification process (short cycle, moderate temperature, closed system) reduces the moisture content in the wood making it both decay and insect resistant, while improving its dimensional stability. This transformation is accomplished without the use of any chemicals.

The result is a beautiful, durable, sustainable product which will perform in the most demanding environments and last for many years to come.
